Data Resilience is critical nowadays

IBM's data resilience story starts with clients, and the huge data resilience challenges they face from ransomware and other threats to their data. IBM's data resilience solutions are featured, from software (Storage Defender) to data resilience in block storage (FlashSystem), software-defined storage (Scale, Fusion, and Ceph), and mainframe storage (DS8000 and tape). A growing concern are "zero-day" exploits, in which bad actors target major applications and operating systems, looking for vulnerabilities they can rapidly exploit before they're detected and patched.

This presentation focuses on IBM's entry-level FlashSystem arrays and discusses how they can help protect organizations by delivering rock-solid storage with a high degree of resilience.

Ransomware Threat Detection

IBM is protecting organizations in ways that other vendors simply do not appear to have available.

Beginning in mid-2023, IBM lead the storage market by building Ransomware Threat Detection into the powerful Storage Virtualize operating system v8.6.0 which runs all models of FlashSystem. It can detect anomalous behavior within minutes.

IBM has accelerated Ransomware Threat Detection by designing it into hardware within the award-winning FlashCore Module 4s (FCM4). The hardware implementation can detect anomalous behavior within seconds.

The faster anomalous behavior is spotted the faster it can be dealt with, thereby minimizing the impact on an organizations data, which in turn helps significantly reduce the time required to correct the situation.

Safeguarded Copy is a differentiator

Safeguarded Copy (SGC) is a protection mechanism for data on IBM Storage FlashSystem arrays.

- SGC creates a copy of data to prevent it from being compromised, either accidentally or deliberately.
- SGC provides immutable backup copies to recover data in case of logical corruption or destruction of primary data.

The majority of FlashSystem arrays support Safeguarded Copy, and this applies to IBM's entry-level models.

- SGC is available on FlashSystem 5045
- SGC is available on FlashSystem 5200

Business-critical data that needs to be resilient

Immutable Safeguarded Copies of business-critical data resides on the primary storage for rapid-recovery but remains hidden from view, and bad actors are unable to get to them.

Meet the IBM Storage FlashSystem 5015

Operations made simple with IBM Storage Insights

Storage made simple with IBM Storage Virtualize

Simple to configure and operate

Designed for budget conscious applications

Efficient, affordable and Safe

Hybrid disk and flash storage for edge, virtual, and containerized environments

Uncompromising service and performance

Ransomware Threat Detection
In the most entry system from IBM. Protecting clients regardless of their budgets.

FlashSystem 5015 flexibility solves issues

Pain Points	Solutions for solving pain points
<p>Smaller clients often have wildly erratic budgets which limit acquisition flexibility</p>	<p>FlashSystem 5015 employs serial-attach-SCSI (SAS) drives. It is available in multiple configurations to meet all price points.</p> <ul style="list-style-type: none"> • An array with only hard disk drives (HDDs). • An All-Flash-Array (AFA) configured with only solid-state drives (SSDs). • A hybrid array configured with both HDDs and SSDs
<p>Client size is not an indicator of performance requirements.</p>	<p>FlashSystem 5015 offers configurations which deliver quick performance to very high-performance and still do so at attractive price points.</p>
<p>Cyber resiliency is important to every client throughout the world, but it can be too costly for smaller organizations</p>	<p>IBM’s entire FlashSystem portfolio, including the entry FlashSystem 5015 includes Ransomware Threat Detection (RTD) built into the Storage Virtualize operating system (OS). It is not an afterthought, and it does not increase the price of the system.</p>
<p>Smaller clients often have small IT departments, making it difficult to deal with multiple environments particularly when the cloud is involved.</p>	<p>IBM’s entire FlashSystem portfolio runs the same Storage Virtualize OS so there is nothing new to learn if larger modules are acquired. Additionally, Storage Virtualize for Public Cloud (SV4PC) enables them to run the same OS in major cloud environments such as AWS, Azure, and IBM Cloud. Once again it means there is nothing new to learn.</p>

Meet the IBM Storage FlashSystem 5045

Operations made simple with IBM Storage Insights

Storage made simple with IBM Storage Virtualize

Simple to configure and operate

Simple to acquire and upgrade

- Supports multiple drive expansion enclosures.
- Supports HyperSwap for up to 100% uptime
- Supports expansion through IBM's new Policy Based HA (PBHA)

Efficient, affordable and Safe

Hybrid disk and flash storage for edge, virtual, and containerized environments

Uncompromising service and performance

Ransomware Threat Detection - Protecting organizations by have the Storage Virtualize OS examine data as it enters the FlashSystem 5045.

Safeguarded Copies - Enabling organizations to use IBM's powerful Safeguarded Copy ability starting with the mid-entry FlashSystem 5045.

FlashSystem 5045 flexibility solves issues

Pain Points	Solutions for solving pain points
<p>Smaller clients often have wildly erratic budgets which limit acquisition flexibility</p>	<p>FlashSystem 5045 employs serial-attach-SCSI (SAS) drives. It is available in multiple configurations to meet all price points.</p> <ul style="list-style-type: none"> • An array with only hard disk drives (HDDs). • An All-Flash-Array (AFA) configured with only solid-state drives (SSDs). • A hybrid array configured with both HDDs and SSDs
<p>Client size is not an indicator of performance requirements.</p>	<p>FlashSystem 5045 offers configurations which deliver quick performance to very high-performance and still do so at attractive price points.</p>
<p>Cyber resiliency is important to every client throughout the world, but it can be too costly for smaller organizations</p>	<p>IBM’s entire FlashSystem portfolio, including the entry FlashSystem 5045 includes Ransomware Threat Detection (RTD) built into the Storage Virtualize operating system (OS). It is not an afterthought, and it does not increase the price of the system.</p>
<p>Small to medium clients are in need of cyber resiliency just as much as larger organizations but often times they can’t afford advanced solutions.</p>	<p>Beginning with FlashSystem 5045, IBM supports the ability to take Safeguarded Copies which are immutable snapshots, on the primary storage, that cannot be altered or deleted. This is a powerful tool for protecting business-critical data. It can be used together with IBM’s Ransomware Threat Detection (RTD) which is built into the Storage Virtualize operating system (OS).</p>
<p>Small to medium clients often have smaller IT departments, making it difficult to deal with multiple environments particularly when the cloud is involved.</p>	<p>IBM’s entire FlashSystem portfolio runs the same Storage Virtualize OS so there is nothing new to learn if larger modules are acquired. Additionally, Storage Virtualize for Public Cloud (SV4PC) enables them to run the same OS in major cloud environments such as AWS, Azure, and IBM Cloud. Once again it means there is nothing new to learn.</p>

Introducing IBM FlashSystem 5045

- Enables Volume Group Snapshots
- Enables Safeguarded Copy
- Expert Care available on 5015 and 5045
- Licensed Machine Code full feature license
- Clustering only with other 5045's

	5035	5045
SAS chain limit	10x 2Uxx	6x 2Uxx or 2x 5U92 + 1x 2Uxx
Max drives	392 per chain 760 per IO group 1520 per system	232 per chain 440 per IO group 880 per system

FlashSystem 5015 and 5045 are simply... flexible

Up to 720TB of raw capacity using twenty-four 30TB SAS solid-state drives (SSDs)

	SAS Flash	SAS HDD
Drive sizes	From 0.8 – 30TB	From 0.9 – 18TB
Protocol	Serial Attach SCSI	Serial Attach SCSI

FlashSystem 5015
FlashSystem 5045

FlashSystem 5015
FlashSystem 5045

Host Connection Protocol	Number of cards per controller	Ports per card	Max ports per dual-controller system
16Gb Fibre Channel with NVMe-oF	1	4	8
10/25Gb Ethernet (RoCE v2)	1	2	4
10/25Gb Ethernet (iWarp)	1	2	4
10Gb Ethernet (iSCSI)	1	4	8
12Gb SAS	1	2	4

Safeguarded Copy and Ransomware Threat Detection

ExpertCare

Operations made simple with IBM Storage Insights

Storage made simple with IBM Storage Virtualize

Simple to configure and operate

Simple to acquire and upgrade

Small footprint. *Huge* impact!

- Deliver more work** with fewer drives and lower cost.
- Reduce IT clutter** with all your storage in as little as one skinny drawer.
- Always on** HA features in a pizza box instead of physically large systems.
- Ransomware Threat Detection** - Protecting organizations by having FlashCore Module 4s examine every I/O as it occurs.
- Safeguarded Copies** - Enabling organizations to use IBM's powerful Safeguarded Copy to create immutable snapshots that can never be altered or deleted.

FlashSystem 5200 flexibility solves issues

Pain Points	Solutions for solving pain points
<p>Small to medium clients who need performance and flexibility may have difficulty obtaining fast storage at an attractive price point.</p>	<p>FlashSystem 5200 uses Non-Volatile Memory express (NVMe) drives. It is available in multiple configurations to meet all price points.</p> <ul style="list-style-type: none"> • An all-flash-array (AFA) with IBM’s unique FlashCore Modules (FCMs). • An all-flash-array (AFA) with industry standard commodity NVMe SSDs. • An all-flash-array (AFA) with Storage Class Memory (SCM) devices. • A hybrid array with any combination of NVMe drives + SAS SSDs and/or HDDs.
<p>Client size is not an indicator of performance requirements.</p>	<p>FlashSystem 5200 offers very high performance with up to 26GB/s bandwidth in a 1U rack form factor. It also delivers latency as low as 50µs.</p>
<p>Cyber resiliency is important to every client throughout the world, but it can be too costly for smaller organizations</p>	<p>IBM’s entire FlashSystem portfolio, including the entry FlashSystem 5200 includes Ransomware Threat Detection (RTD) built into each FlashCore Module 4 (FCM4), where detection occurs in seconds plus RTD in the Storage Virtualize operating system (OS). It is not an afterthought, and it does not increase the price of the system.</p>
<p>Small to medium clients are in need of cyber resiliency just as much as larger organizations but often times they can’t afford advanced solutions.</p>	<p>FlashSystem 5200 supports the ability to take Safeguarded Copies which are immutable snapshots, on the primary storage, that cannot be altered or deleted. This is a powerful tool for protecting business-critical data. It can be used together with IBM’s Ransomware Threat Detection (RTD) which is built into the Storage Virtualize operating system (OS).</p>
<p>Small to medium clients often have smaller IT departments, making it difficult to deal with multiple environments particularly when the cloud is involved.</p>	<p>IBM’s entire FlashSystem portfolio runs the same Storage Virtualize OS so there is nothing new to learn if larger modules are acquired. Additionally, Storage Virtualize for Public Cloud (SV4PC) enables them to run the same OS in major cloud environments such as AWS, Azure, and IBM Cloud. Once again it means there is nothing new to learn.</p>

FlashSystem 5200 is simply... flexible

	IBM FlashCore	NVMe Flash	Storage Class Memory	SAS Flash*
Drive sizes	From 4.8 – 38.4TB	From 1.92 – 30TB	1.6TB	From 1.92 – 30.72TB
Protocol	NVMe	NVMe	NVMe	Serial Attach SCSI

FlashSystem 5200

Host Connection Protocol	Number of cards per controller	Ports per card	Max ports per dual-controller system
32Gb Fibre Channel with NVMe-oF	2	2	8
16Gb Fibre Channel with NVMe-oF	2	4	16
10/25Gb Ethernet (iSCSI and NVMe)	2	2	8
10Gb Ethernet (iSCSI)	1	4	8

FlashSystem-AF7-9110-Class-2	Defined hosts show as offline status.	Investigat
FlashSystem-AF7-9110-Class-3	Defined hosts show as offline status.	Investigat

The detailed view on the right shows a recommendation titled 'Enable Configuration Reporting for automated system analysis' with a timestamp of 'Dec 4, 2019, 12:29:46'. It includes buttons for 'Acknowledge' and 'Unacknowledge'. The device name is 'FlashSystem-AF8-9150-5'. The text explains that IBM systems automatically check configuration for known issues and best practice violations, but this validation is currently disabled on the system because the Configuration Reporting feature is disabled. It notes that this feature is also known as Enhanced Inventory. A final paragraph states that IBM strongly recommends enabling Configuration Reporting for all systems using callhome and Storage Insights, and provides instructions on how to enable it via the GUI.

IBM Storage Expert Care

Integrates and prepackages hardware and software support services into a tiered support model, helping organizations to choose the right fit of services – including the number of years of support, response times from initial contact to fix.

Simple to choose

Which tier?

Basic, Advanced, or Premium¹

And for how long?

1-5 years

Included with the “Premium” Expert Care tier services:

Hardware Services

24x7¹ same day onsite repair

Enhanced response Time

30 minutes initial response for severities 1 and 2 issues

Predictive Support

Predictive analytics support, capacity planning, monitoring, and reporting

Technical Account Manager

Proactive and personal support from a highly specialized subject matter expert

IBM Remote Code Loads

Remote software microcode updates twice per year

IBM Storage Expert Care IBM FlashSystem

Choose the level of support required for the duration needed.
